

To dispose of quantities of waste paper, two down-draught incinerators in a lock-up shed are employed, but due to sheer bulk of material these are scarcely adequate. Main bulk of waste material is derived from off-cuts and carbon from handspeed take plus daily disposal of archive material after 3 months storage. (A bid has been made in the 1966/67 Design List for an improved model incinerator as part of the Operations Room main building)
